Cathedral Windows Hosta

Hosta 'Cathedral Windows'

Plant Height: 20 inches

Flower Height: 4 feet

Spread: 3 feet

Spacing: 28 inches

Sunlight: ● ●

Hardiness Zone: 3a

Other Names: Plantain Lily, Funkia

Description:

This selection forms a large clump of rounded, bright gold leaves with very wide, dark green margins; leaves become dome shaped as they mature; provides beautiful texture and contrast to other plants; near-white spikes of flowers in late summer

Ornamental Features

Cathedral Windows Hosta features dainty spikes of white tubular flowers rising above the foliage in late summer. Its attractive large textured heart-shaped leaves remain gold in color with distinctive dark green edges and tinges of chartreuse throughout the season.

Landscape Attributes

Cathedral Windows Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Cathedral Windows Hosta is recommended for the following landscape applications;

Planting & Growing

Cathedral Windows Hosta will grow to be about 20 inches tall at maturity extending to 4 feet tall with the flowers, with a spread of 3 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 28 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
