Zachary's Fine Gold Leaf Stonecrop

Sedum 'Zachary's Fine Gold Leaf'

Height: 5 inches

Spread: 12 inches

Spacing: 10 inches

Sunlight:

Hardiness Zone: (annual)

Description:

This terrific variety has brilliant, golden yellow foliage that really stands out; one of the most colorful of the sedums; its mounded habit is tidy and fast growing; excellent in rock gardens, containers, or as edging

Ornamental Features

Zachary's Fine Gold Leaf Stonecrop is smothered in stunning yellow star-shaped flowers at the ends of the stems from early to mid summer. Its attractive succulent needle-like leaves emerge yellow in spring, turning gold in color throughout the season.

Landscape Attributes

Zachary's Fine Gold Leaf Stonecrop is a dense herbaceous annual with a ground-hugging habit of growth. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

Zachary's Fine Gold Leaf Stonecrop is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Groundcover

Planting & Growing

Zachary's Fine Gold Leaf Stonecrop will grow to be only 4 inches tall at maturity, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. Its foliage tends to remain low and dense right to the ground. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in poor soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
