Emerald Peak Yew

Taxus cuspidata 'Tvrudy'

Height: 8 feet

Spread: 6 feet

Sunlight:

Hardiness Zone: 4a

Description:

A compact and dense evergreen shrub with an attractive pyramidal habit, features beautiful deep green needles which emerge emerald green; great for the shrub border, takes pruning extremely well; one of the few evergreens that tolerates shade

Ornamental Features

Emerald Peak Yew is a dwarf conifer which is primarily valued in the landscape or garden for its distinctively pyramidal habit of growth. It has dark green foliage with chartreuse undersides which emerges light green in spring. The ferny sprays of foliage remain dark green throughout the winter. The fruits are showy red drupes displayed from early to late fall.

Landscape Attributes

Emerald Peak Yew is a dense multi-stemmed evergreen shrub with a distinctive and refined pyramidal form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and can be pruned at anytime. It has no significant negative characteristics.

Emerald Peak Yew is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Groundcover

Planting & Growing

Emerald Peak Yew will grow to be about 8 feet tall at maturity, with a spread of 6 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub performs well in both full sun and full shade. However, you may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.
