### **Ilavea Cuphea**

*Cuphea ilavea*

Height: 30 inches

Spread: 3 feet

Sunlight:

Hardiness Zone: (annual)

#### **Description:**

Small, freely branching shrub or subshrub with unusual tubular flowers lipped with upward facing red petals and purple eyes with dark red flutes; great for bedding, shrub borders, and containers in warm climates

#### **Ornamental Features**

Llavea Cuphea features showy red tubular flowers with purple throats and curiously fluted crimson tips along the branches from mid spring to mid fall. Its tomentose pointy leaves remain grayish green in color throughout the year.

#### **Landscape Attributes**

Llavea Cuphea is a multi-stemmed annual with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies and hummingbirds to your yard. It has no significant negative characteristics.

Llavea Cuphea is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

### Planting & Growing

Llavea Cuphea will grow to be about 30 inches tall at maturity, with a spread of 3 feet. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. Although it's not a true annual, this plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This species is not originally from North America.

Llavea Cuphea is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
