Marie Rose™ New Jersey Tea *Ceanothus 'Minmarose'*

Height: 4 feet

Spread: 3 feet

Sunlight: ☉ ●

Hardiness Zone: 5b

Other Names: California Lilac

Description:

A dense, mounded shrub with bright green glossy foliage; a prolific bloomer, covered in clusters of pink flowers in mid-summer, then again in early fall; perfect for borders and rock gardens; very hardy and drought tolerant once established

Ornamental Features

Marie Rose New Jersey Tea is covered in stunning clusters of pink flowers at the ends of the branches from mid summer to early fall. It has attractive forest green evergreen foliage. The glossy pointy leaves are highly ornamental and remain forest green throughout the winter. The deep purple branches are extremely showy and add significant winter interest.

Landscape Attributes

Marie Rose New Jersey Tea is a dense multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

Planting & Growing

Marie Rose New Jersey Tea will grow to be about 4 feet tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is not particular as to soil type or pH, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid.
