### Hummel's Sunset Golden Jade Plant

*Crassula ovata 'Hummel's Sunset'*

Height: 3 feet

Spread: 24 inches

Sunlight: ☉ ●

Hardiness Zone: 9b

Other Names: Money Plant, Dollar Plant

#### Description:

An elegantly branched shrub with foliage that takes on spectacular hues of yellow and gold, with red edges; white flower clusters in late winter when exposed to full sun; very slow growing; an excellent choice for containers and rock gardens

#### Ornamental Features

Hummel's Sunset Golden Jade Plant features dainty clusters of white star-shaped flowers at the ends of the branches in late winter. The flowers are excellent for cutting. It has attractive antique red-variegated dark green foliage with hints of gold which emerges yellow in spring. The succulent round leaves are highly ornamental and remain dark green throughout the winter. The coppery-bronze stems are very effective and add winter interest.

#### Landscape Attributes

Hummel's Sunset Golden Jade Plant is a multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

## Design+Build

This is a relatively low maintenance shrub, and can be pruned at anytime. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Hummel's Sunset Golden Jade Plant is recommended for the following landscape applications;

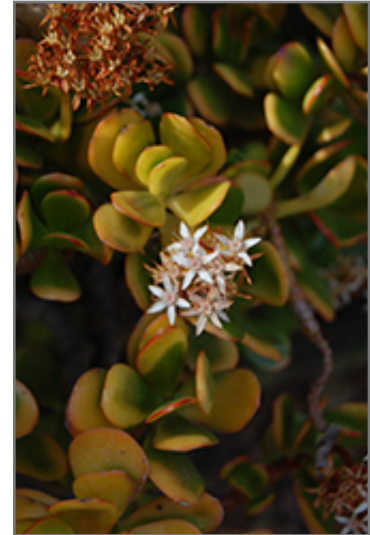

- Accent
- Mass Planting
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

### Planting & Growing

Hummel's Sunset Golden Jade Plant will grow to be about 3 feet tall at maturity, with a spread of 24 inches. It has a low canopy with a typical clearance of 1 foot from the ground. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in sandy soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Hummel's Sunset Golden Jade Plant makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, this plant may be too tender to survive the winter if left outdoors in a container. Contact our experts for more information on how to protect it over the winter months.
